

HOPPE at WIDOFA in Dubai: Quality made in Europe

Windows, Doors & Facades (WIDOFA) is a new trade fair in Dubai. Originally a part of The Big 5, one of the largest construction events in the Middle East, WIDOFA has now developed into a separate trade fair taking place for the first time from 18 to 20 September 2016 at the Dubai World Trade Center in the UAE. More than 150 exhibitors will showcase their products and solutions to an expected number of at least 5,000 visitors.

HOPPE will exhibit its range of high-quality door and window hardware made in Europe. In Hall Zabeel, Stand Z5E30 – on more than 70 square metres – visitors are invited to find out about the Handle of excellence. They will also have the opportunity to try some of the easy-to-use installation techniques.

HOPPE brand quality

HOPPE is the European leader in the development, production and sale of architectural hardware for doors and windows. It manufactures aluminium, stainless steel, brass and nylon fitting systems at its seven plants. All HOPPE Group production sites in Europe are certified in line with the international DIN EN ISO 9001 standard. HOPPE has been present in the GCC market for twenty years. Since 2010 HOPPE has run a representative office in Dubai.

ARRONE® – developing and enhancing the product range

Under the ARRONE® brand name, HOPPE Group is able to offer a comprehensive range of architectural quality door and window hardware for the Middle East market along with accessories. Many products are produced exclusively by leading hardware manufacturers throughout the world. Within the extensive range are door closers, floor springs, emergency exit devices, cylinders, architectural mortice lock cases, hinges, disabled fittings, signs, etc. ARRONE® products are designed and manufactured to compliment the HOPPE range of aluminium, brass, stainless steel and nylon door and window hardware.

The Austin Series: Modern design, proven technology

Flat rosettes create special accents with windows. With Austin, HOPPE offers a window handle series that perfectly fits into a style that is reduced to the essentials – without sacrificing proven technology. With Secustik® technology the Austin series offers proven basic protection against break-ins, which is further enhanced in the lockable variants with Secu100® technology. The patented Secustik® blocking mechanism makes unauthorised displacement of the window fitting from the outside more difficult: it jams the handle if anyone tries to turn it from the outside by way of the hardware. Secu100® protects the locked window handle up to a force of 100 Newton metres from being forcibly turned or ripped off.

VarioFit® – A single window handle for a range of window profiles

With patented VarioFit® technology for Secustik® window handles, the right spindle length for a variety of window profiles is always in stock. Window handles with VarioFit®, the adjustable spindle, adapt to the depth of the individual window profile by means of a pressure spring. This way the spindle is pressed smoothly into the square recess of the gear follower, ensuring a perfect fit. VarioFit® window handles can be used with installation depths that vary up to 10 mm. They can be fitted to windows with various profile cross-sections, thereby generating large saving potential when it comes to storage and logistics.

SecuSan® – The new hygiene standard

A door handle is touched by thousands of people unknown to each other, and often they pass on germs in doing so. SecuSan® door and window handles from HOPPE offer a solution that actively prevents the spread of infection. SecuSan® is a special surface that immediately suppresses microbial growth on the handle on a lasting basis. The highly effective SecuSan® surface, which prevents the growth of germs such as bacteria, algae and fungi, has been proven in independent laboratory tests conducted in line with international standards. The antimicrobial surface has also proven its effectiveness in daily use in medical institutions. Compared to wipe disinfection, SecuSan® is particularly effective over time. So wherever there are large numbers of people, SecuSan® handles help to maintain high standards of hygiene. For further information please refer to www.secusan.com.

Sertos® clip-in connection: Quickly installed, extremely durable

The Sertos® clip-in connection for commercial buildings is particularly easy to fit and will also be removed without much effort. There is no need for any special tools – a conventional screwdriver is perfectly suitable. The core

element of the new technology is the ball locking mechanism, developed by HOPPE, in the clip-in connection. But that's not all: the new Sertos® connection for the commercial sector is also extremely durable. It withstands endurance tests of one million operating cycles without any functional impairment. This means that Sertos® handle sets outperform the requirements of DIN EN 1906 for category of use grade 4 by five times.

HOPPE Quick-FitPlus – Less is more

HOPPE Quick-FitPlus is the logical further development of the tried and tested HOPPE Quick-Fit connection. Not only can the door handles be fitted easily without screws and almost no tools, but also the square or round flat roses and escutcheons. The new HOPPE Quick-FitPlus sets are striking with their almost flat, flush rose design. Attractive flat roses and door handles with Quick-Fit connection can be fitted to the door in no time – in renovation, too. The roses with supporting lugs and the door handles are just fitted together on the prepared door. Self-adhesive escutcheons can also be fitted if required.
