

## HOPPE at The Big 5 in Dubai: Quality made in Europe

With more than 2,800 exhibitors and an estimated 80,000 trade visitors, The Big 5 is one of the largest construction events in the Middle East. This year, it takes place in Dubai from 23 to 26 November 2015. For HOPPE, a company with the highest quality standards, it will be the 11<sup>th</sup> time to exhibit its range of high-quality door fittings made in Europe. In Hall 6, Stand E271 – on more than 70 square metres – visitors are invited to find out about HOPPE's range of products. They also have the opportunity to engage in interesting conversations about our innovative new products and try out one or two of our easy-to-use installation techniques.

### **HOPPE brand quality**

HOPPE Group is the European leader in the development, production and sale of architectural hardware for doors and windows. Founded in 1952, the company run by the owning family with headquarters in Switzerland has more than 2,600 employees worldwide. It manufactures aluminium, stainless steel, brass and nylon fitting systems at its seven plants. All HOPPE Group production sites in Europe are certified in line with the international DIN EN ISO 9001 standard. HOPPE has been present in the GCC market for twenty years. Since 2010 HOPPE has had a representative office in Dubai.

### **ARRONE® – developing and enhancing the product range**

Under the ARRONE® brand name, HOPPE Group is able to offer a comprehensive range of architectural quality door and window hardware for the Middle East market along with accessories. Many products are manufactured exclusively by leading hardware manufacturers throughout the world. Within the extensive range are door closers, floor springs, emergency exit devices, cylinders, architectural mortice lock cases, hinges, disabled fittings, signs etc. ARRONE® products are designed and manufactured to compliment the HOPPE range of aluminium, brass, stainless steel and nylon door and window hardware.

### **SecuSan® – The new hygiene standard**

A door handle is touched by thousands of people unknown to each other, and often they pass on germs in doing so. SecuSan® door and window handles from HOPPE offer a new solution that actively prevents the spread of infection. SecuSan® is a special surface that immediately suppresses microbial growth on the handle on a lasting basis. The highly effective SecuSan® surface, which prevents the growth of germs such as bacteria, algae and fungi, has been proven in independent laboratory tests conducted in line with international standards. The antimicrobial surface has also proven its effectiveness in daily use in medical institutions. Compared to wipe disinfection, SecuSan® is particularly effective over time. So wherever there are large numbers of people, SecuSan® handles help to maintain high standards of hygiene. For further information please refer to [www.secusan.com](http://www.secusan.com).

### **Sertos® – Clip-in connection with ball locking mechanism**

One of the focal points at the HOPPE exhibition display is the Sertos® clip-in connection for commercial applications. Not only is it particularly easy to fit, it can also be removed without much effort. And without the need for any special tools – a conventional screwdriver is perfectly suitable. The core element of the new technology is the ball locking mechanism, developed by HOPPE, in the clip-in connection. But that's not all: the new Sertos® connection for the commercial sector is also extremely durable. It withstands endurance tests of one million operating cycles without any functional impairment. This means that Sertos® handle sets outperform the requirements of DIN EN 1906 for category of use grade 4 by five times.

### **HOPPE Quick-FitPlus – Less is more**

HOPPE Quick-FitPlus is the logical further development of the tried and tested HOPPE Quick-Fit connection. Not only just the door handles can be fitted easily without screws and almost no tools, but also square or round flat roses and escutcheons. The new HOPPE Quick-FitPlus sets are striking with their almost flat, flush rose design. Attractive flat roses and door handles with Quick-Fit connection can be fitted to the door in no time – in renovation, too. The roses with supporting lugs and the door handles are just fitted together on the prepared door. Self-adhesive escutcheons can also be fitted if required.
