

The perfect fit! VarioFit® by HOPPE

There are many different profile systems available for aluminium, wood, and PVC windows, and this stems in no small part from energy saving requirements and safety concerns, as well as design considerations. These systems also require compatible spindle lengths, meaning that the window handles need to be stocked with different spindle lengths. This is inconvenient and leads to considerable additional logistical and administrative costs. With VarioFit®, HOPPE offers a spindle for window handles adjustable by up to 10 millimetres.

A single window handle for a range of window profiles.

With patented VarioFit® technology for Secustik® window handles, the right spindle length for a variety of window profiles is always in stock. The window handle with VarioFit, the adjustable spindle, adapts to the depth of the individual window profile. This is enabled by means of a pressure spring fitted on the spindle in the inside of the window handle. Thanks to the spring mechanism, the spindle is pressed smoothly into the square recess of the gear follower, ensuring a perfect fit.

The Secustik® window handle with VarioFit® can be used with various installation depths of up to 10 mm and can therefore be fitted to windows with various profile cross-sections. Compared to current window handles with fixed spindle lengths, using Secustik® window handles with VarioFit® considerably reduces the number of variants. The associated cost saving potential from the reduction in complexity is clear to see.

VarioFit® is available for a wide range of popular Secustik® models, and comes as standard in the 32-42 mm version (projecting spindle length) including 2 pairs of screws. Some new additions are the lockable handle variants with VarioFit®. Lockable window handles both protect children and vulnerable people and serve as active burglary protection. The closed or tilted window

can be locked quickly and easily "at the touch of a button" on the lock. A large reversible key makes handling particularly convenient.

With proven break-in protection technology

Secustik® technology is integrated into all variants with VarioFit®. It makes it more difficult to twist the square spindle and therefore to displace the hardware from the outside. The lockable handles are additionally equipped with Secu100® + Secustik®; i.e. the handles can withstand a force of up to 100 Newton metres. Turning or tearing off the locked window handle is therefore so difficult that forcible opening is unlikely.
