1. Install handle set per Handle Set Installation Instructions for Sliding Patio Door.

2. Adjust the patio rollers until the door is level and rolls smoothly.

3. The guide pin on the door hardware should enter the corresponding guide pinhole in the striker to ensure proper alignment.

4. If the guide pin hits the striker, loosen the striker screw in the slotted hole and adjust the striker until the guide pin aligns with the guide pinhole.

5. Once the door is level and properly aligned, insert screws into the two holes in the striker that are not slotted. This will fix the position of the striker.

6. The guide pin can now be removed if the customer chooses.
